1 Use Case

Use Case: Export Document
Actors: User
Description: The User selects export document. The system asks to which format. The user selects a format. The system exports the document.
References See requirements #xxx, #yyy, and #zzz for a list of export formats to support.

Actor	System
1. User selects "Export Document"	
	2. The system presents a list of export formats
3. The user selects a format	
	4. The system asks for a filename
5. The user specifies a filename	
6. The user clicks the "perform export" button	
	7. The system exports the document using the sele

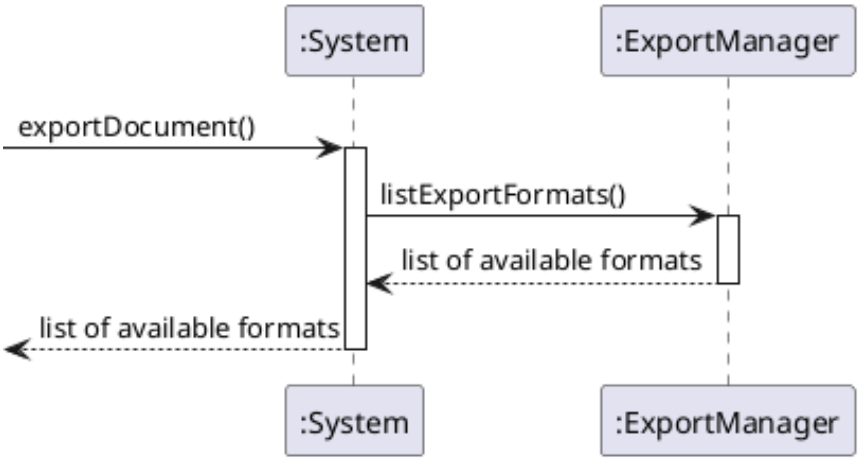

2 System Sequence Diagram

- exportDocument() – returns a list of export formats
- selectExportFormat()
- selectFilename()
- performExport()

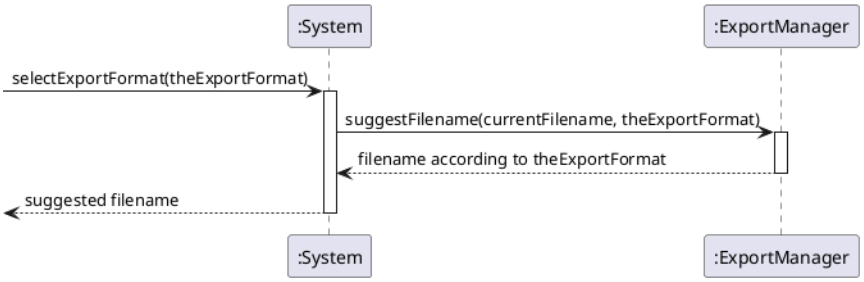

User
:System
exportDocument()
list of export formats
selectExportFormat()
ok, suggest a filename
selectFilename()
alt
[filename is ok]
ok
filename is not ok
performExport()
ok (document exported)
User
:System
