1 Introduktion

Applikationen är en enkel dagboks-applikation; man kan som användare skapa en eller flera dagböcker, och sedan göra inlägg i dessa.

2 Exempel på Use Cases

Use Case: Create Diary
Actors: Diary Author

Description: A diary author selects "Create New Diary".
The system asks for the name of the new diary and a short description of it.
The system lists available diary categories and ask the author to select which categories that apply.
The author selects applicable categories and selects "Create".
The system presents a summary of the diary and asks the user to confirm before creation.
The author reviews the information for the new diary and confirms. The system creates the diary.

Use Case: Create Post in Diary
Actors: Diary Author
Description: A diary author selects "Create new Post". The system lists the diaries available to the author.
The author selects one of the diaries. The system asks for the text of the post.
The author writes the post and selects "Submit".
The system lists available keywords and asks the author to select which keywords that apply.

*Mikael.Svahnberg@bth.se

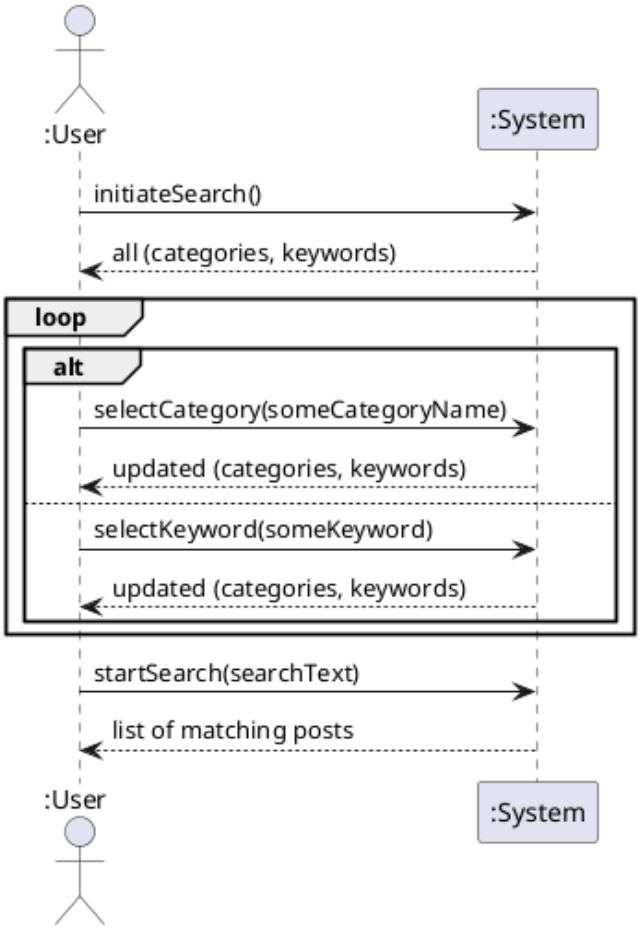

The author selects applicable keywords and select “Post”. The system adds the post to the diary and redisplays.

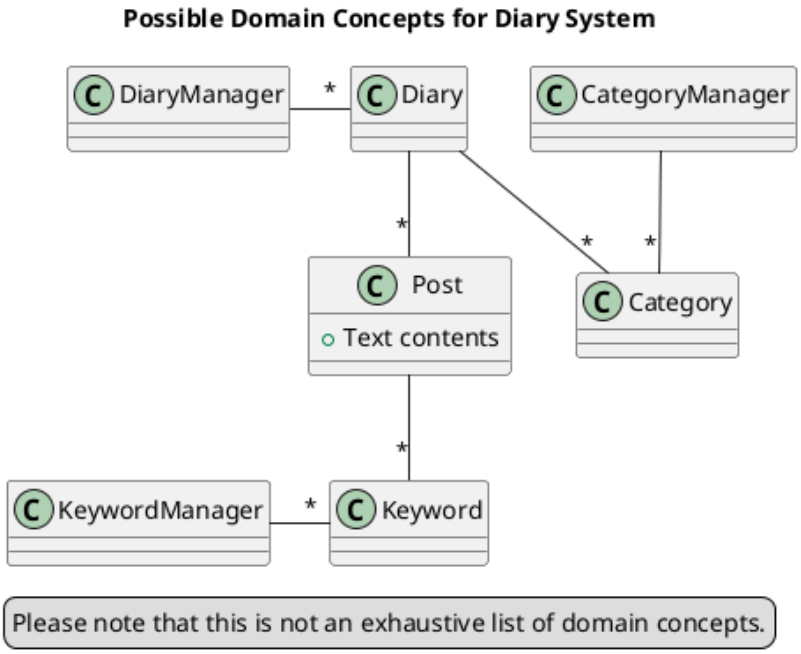

Use Case: Search for Post
Actors: User
Description: The user selects “Search”. The system lists available categories and keywords,
and asks the user to select applicable categories or keywords.
The system also provides a search box where the user can write anything.
The user selects applicable categories and keywords, types in text to search for, and selects “Search”.
The system displays a list of posts that match the search terms.
