Kommentar struktur och upplägg.

this course really needs labs where the teachers are present to help with the assignments

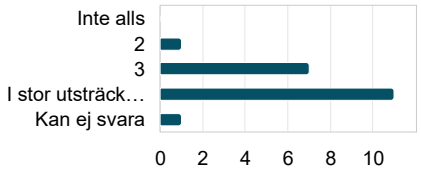

Kursens läraktiviteter har gett mig möjlighet att uppnå kursens mål.

	Medelvärde	Standardavvikelse	Median
	3.5	0.6	4.0

Under kursens gång har det skett en aktiv återkoppling som varit värdefull för mina studier.

	Antal svar	Fördelning (%)
Inte alls	0	0%
2	1	5%
3	10	50%
I stor utsträckning	7	35%
Kan ej svara	2	10%
Summa	**20**	**100%**

	Medelvärde	Standardavvikelse	Median
	3.3	0.6	3.0

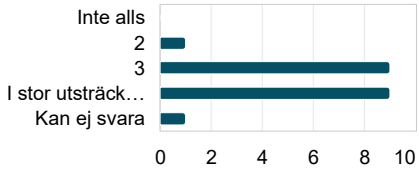

Kommentar återkoppling.

For some of the assignments, it would have been helpful to receive feedback earlier so that we could take it into account for the next assignment. For example, the feedback for the first assignment was returned after the due date of the second assignment, which made it hard to apply what we learned from it.

I understand that grading all submissions and providing constructive feedback within 7 days is difficult. What I'm unsure about is when the grading process actually starts I presume grading doesn't start until the Monday after the due date.

Our group usually submitted on the due date, since we worked on the assignments during the week before and refined them based on the what was said on lectures. But if the grading is done in a "first come, first graded" manner, then submitting earlier might lead to earlier feedback. If that's the case, it might be helpful to communicate that to students as a way to potentially receive feedback sooner.

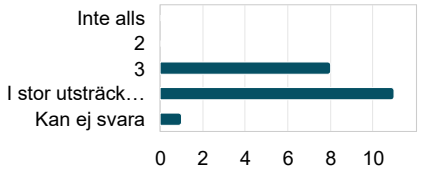

Bemötandet från lärare och handledare har motiverat mig i mina studier.

Kommentar eget ansvar för mina studier.

it was for many documnets at read

Vad tyckte du var speciellt bra med kursen; sådant som du skulle rekommendera oss att behålla i kommande kursgenomförande? Vilka förändringar kan göras för att öka kursens kvalitet?

This might be a bit outside the scope of the course itself, but I just wanted to mention that having this course at the same time as PA1456 worked really well for me personally. PA1456 gave me a great opportunity to practice object-oriented design, and I feel like I wouldn't have understood design patterns as well as I do now if I hadn't tried applying them directly in the project code. I realize that adding a coding assignment to this course would be difficult, and I'm not suggesting replacing the diagram assignments either—those discussions were really helpful too. But whoever scheduled both courses in parallel made a great decision, because they complemented each other perfectly.
All the course material and assignments were available from the start which made planing the course easier with other parallel courses.
I really think the course was amaxing. Great chance for us too learn about structuring etc. Although i think that the assignments were harder to understand rather than to complete. It was hard to understand what was wanted from me.
I like the exam parts with the assignments and the final exam. However I believe that the lectures are lacking a bit, maybe to a more simplified lecture with shorter explanations. I did sometimes think that the lecture were so long and not very engaging.
This course is generally good, but some things still seems confusing even after the course
